Statistical Addendum to:

A Poor Means Test? Econometric Targeting in Africa

Cait Brown, Martin Ravallion and Dominique van de Walle¹

¹ Brown and Ravallion are with the Department of Economics, Georgetown University, and van de Walle is with the Development Research Group, World Bank. These are the views of the authors and need not reflect those of their employers.

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is log consumption per capita. A linear probability model is used for estimation. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in. * p<.10 ** p<.05 *** p<.01

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is log consumption per capita. A quantile regression centered at the 20th percentile is used for estimation. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in.

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is consumption per capita. A linear probability model is used for estimation. Only the poorest 40 percent of households are included in the regression. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in.

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is consumption per capita. A linear probability model is used for estimation. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in. * p<.10 ** p<.05 *** p<.01

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is consumption per capita. A linear probability model is used for estimation. Only the bottom 20 percent of households are included in the regression. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in.

* p < .10 ** p < .05 *** p < .01

Note: Robust stand			Standard error	e are clustere		The depende			ner canita A

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is consumption per capita. A linear probability model is used for estimation. Only the bottom 40 percent of households are included in the regression. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in.

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is consumption per capita. A linear probability model is used for estimation. Only the bottom 60 percent of households are included in the regression. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in. * p<.10 ** p<.05 *** p<.01

Table A16: Targeting Errors for Extended PMT using Quantile Regression Centered at the Poverty Line

	Inclusion Error	Exclusion Error	Inclusion Error	Exclusion Error	Targeting Error	Targeting Error	
	(IER)	(EER)	(IER)	(EER)	(TER)	(TER)	
		Fixed pove	erty line		Fixed poverty rate		
	$z = F^{-1}(0.2)$		$z = F^{-1}(0.4)$		H = 0.2	H = 0.4	
Burkina Faso	0.554	0.164	0.286	0.177	0.431	0.247	
Ethiopia	0.655	0.221	0.414	0.264	0.536	0.379	
Ghana	0.493	0.166	0.253	0.208	0.381	0.237	
Malawi	0.565	0.203	0.314	0.203	0.458	0.276	
Mali	0.581	0.137	0.325	0.121	0.477	0.273	
Niger	0.631	0.232	0.364	0.204	0.485	0.319	
Nigeria	0.448	0.111	0.238	0.160	0.307	0.194	
Tanzania	0.569	0.147	0.305	0.160	0.435	0.261	
Uganda	0.606	0.130	0.335	0.145	0.434	0.276	
Mean	0.588	0.174	0.334	0.201	0.450	0.292	

Note: Errors are calculated using the predicted values from the regressions using Extended PMT variables. A quantile regression centered at the poverty line at the 20^{th} and 40^{th} percentile for the first and second two columns respectively is used to estimate the model. Definitions of the various error rates can be found in the text. Statistics are household weighted.

Table A17: Targeting Errors for Extended PMT using a Poverty-Weighted Regression (Poor Only)

	Inclusion Error	Exclusion Error	Inclusion Error	Exclusion Error	Targeting Error	Targeting Error		
	(IER)	(EER)	(IER)	(EER)	(TER)	(TER)		
		Fixed po	verty line		Fixed poverty rate			
	z = F	⁻¹ (0.2)	z = F	-1(0.4)	H = 0.2	H = 0.4

N	10378	5047	4617	3952	3240	3859	3741	4775	2671

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is consumption per capita. A linear probability model is used for estimation. Household size and age of household head are included as continuous variables. Month and state of residence are excluded. A cutoff point at p = 0.01 and a backwards selection method was used to estimate the model. *p < .05 ***p < .01

N	10378	5047	3952	3859	3741	4775	2671

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is consumption per capita. A linear probability model is used for estimation. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in. * p<.10 ** p<.05 *** p<.01

Table A23: Targeting Errors for Extended PMT with Household Shocks and Food Security Variables

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is consumption per capita. A linear probability model is used for estimation. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in.

Table A26: Targeting Errors for Extended PMT with Household Shocks, Food Security, and Community-level Variables

	Inclusion Error	Exclusion Error	Inclusion Error	Exclusion Error	Targeting Error	Targeting Error
-	(IER)	(EER)	(IER)	(EER)	(TER)	(TER)
		Fixed po	verty rate			
	z = F	⁻¹ (0.2)	$z = F^{-1}(0.4)$		H = 0.2	H = 0.4
Ethiopia	0.429	0.855	0.367	0.437	0.518	0.378
Malawi	0.368	0.627	0.265	0.332	0.437	0.283
Niger	0.420	0.665	0.322	0.299	0.465	0.317
Nigeria	0.264	0.390	0.184	0.220	0.308	0.197
Tanzania	0.367	0.581	0.268	0.264	0.428	0.268
Uganda	0.361	0.494	0.286	0.259	0.423	0.278
Mean	0.358	0.657	0.298	0.331	0.448	0.306

Note: Errors are calculated using the predicted values from the extended PMT regressions with household shocks, food security, and community-level variables as shown in Table A25. Statistics are household weighted.

<u>N</u> ote: Robust standard errors in parentl	5047	4340	3952	3859	4775	2671

Note: Robust standard errors in parentheses. Standard errors are clustered at the PSU. The dependent variable is consumption per adult equivalent. Equivalence scales are missing for Burkina Faso, Mali, and Nigeria. A linear probability model is used for estimation. All regressions include dummies for household size (in intervals 1, 3, 5, 7 and 9 or more); the age of the household head (in five year intervals starting at age 15); the state (or region) in which the household resides; and the month the household was surveyed in. * p<.10 ** p<.05 *** p<.01

Note: Eligible households receive uniform per capita transfers. The total transfer amount for each country is equal to each country's aggregate poverty gap. The poverty line is used to determine whether a household is eligible. The statistics in the table give the change in the country's poverty gap index following the transfer. The starting value of the poverty gap index is given in the first row. Universal is a transfer to all households adjusted for household size. All households with PMT-predicted consumption below the poverty line receive a transfer of equal size. Descriptions of the various PMTs can be found in the text. Categorical targeting gives transfers to each household member who meets the specified category. For example, if a member meets the category twice he receives two transfers (e.g. elderly and disabled). The number of children who can receive transfers under the child category is capped at 3. In the final category, a household receives a transfer if it has received one or more household-level shocks. Statistics are household weighted.

Nigeria	0.215	0.843	0.181	0.550	0.434	0.299
Tanzania	0.459	0.747	0.336	0.312	0.521	0.329
Uganda	0.488	0.769	0.393	0.355	0.557	0.383
Mean	0.454	0.858	0.334	0.602	0.588	0.390
			Extended PMT			
		Fixed	poverty line		Fixed p	overty rate
	z = F	-1(0.2)	$z = F^{-1}$	(0.4)	H = 0.2	H = 0.4
Ethiopia	0.392	0.976	0.357	0.807	0.639	0.471
Malawi	0.583	0.619	0.408	0.359	0.602	0.408
Nigeria	0.181	0.802	0.203	0.541	0.416	0.295
Tanzania	0.431	0.671	0.325	0.305	0.503	0.317
Uganda	0.487	0.662	0.350	0.359	0.527	0.353
Mean	0.438	0.815	0.324	0.564	0.551	0.386

Note: The parameters of the PMT score are estimated using Round 1 data, then predicted values are generated using Round 2 covariate values. These calculations are for Method 2 described in the main text. Statistics are household weighted.

Table A32: Targeting Differentials for Panel PMTs

	Basic PMT			Extended PMT				
	No lags	Method 1	Method 2	No lags	Method 1	Method 2		
Ethiopia	0.064	0.005	0.010	0.118	0.007	0.020		
Malawi	0.182	0.412	0.223	0.303	0.482	0.249		
Nigeria	0.475	0.161	0.146	0.538	0.165	0.187		
Tanzania	0.306	0.229	0.149	0.382	0.285	0.266		
Uganda	0.285	0.305	0.175	0.423	0.423	0.258		
Mean	0.262	0.222	0.151	0.353	0.272	0.196		

Note: Targeting differentials are computed using poverty lines set at the 20th percentile. Method 1 uses Round 1 PMT calibration and Round 2 data to generate predicted values. Method 2 uses Round 1 predicted values and Round 2 actual consumption. "No lags" refers to results when the PMT is calibrated and compared to Round 2 data (i.e. the panel structure is not used but only panel households are included, such that the numbers will differ slightly from Table 8). Statistics are household weighted.

Table A33: Poverty Gap Index Post Transfer Allowing for Lags

	Ethiopia	Malawi	Nigeria	Tanzania	Uganda	Mean
Poverty Gap Index pre-transfer	0.054	0.048	0.056	0.058	0.057	0.055

Method 1 Basic PMT	0.053	0.032	0.042	0.041	0.036	0.045
Method 1 Extended PMT	0.053	0.030	0.042	0.037	0.031	0.043
Method 2 Basic PMT	0.053	0.032	0.044	0.042	0.042	0.046
Method 2 Extended PMT	0.052	0.032	0.041	0.037	0.037	0.043
Categorical Targeting						
Elderly 65+	0.048	0.042	0.040	0.051	0.040	0.046
Widowed or disabled	0.046	0.041	0.043	0.049	0.046	0.046
Elderly, widows & disabled	0.046	0.040	0.037	0.049	0.038	0.043
Children under 14	0.041	0.036	0.033	0.043	0.041	0.039
Elderly, widows, disabled & children	0.041	0.036	0.029	0.044	0.038	0.038
Female heads with children	0.048	0.039	0.050	0.046	0.040	0.047

Note: Method 1 uses Round 1 PMT calibration and Round 2 data to generate predicted values. Method 2 uses Round 1 predicted values and compares to Round 2 actual household per capita consumption. The Basic and Extended PMT methods use Round 2 data only (i.e. no lags). Universal refers to a transfer to all households weighted by household size. Categorical targeting categories are defined in Table 9. Only panel households are included. Statistics are household weighted.

Table A34: Watts Index Post Transfer Allowing for Lags

	Ethiopia	Malawi	Nigeria	Tanzania	Uganda	Mean
Poverty Gap Index pre-transfer	0.073	0.062	0.074	0.078	0.078	0.074
Universal (basic income)	0.330	0.274	0.277	0.340	0.339	0.318
Basic PMT covariates						
Basic PMT	0.353	0.279	0.249	0.315	0.307	0.316
Extended PMT	0.348	0.252	0.233	0.283	0.262	0.298
Method 1 Basic PMT	0.363	0.254	0.330	0.344	0.330	0.342
Method 1 Extended PMT	0.363	0.245	0.328	0.325	0.272	0.333
Method 2 Basic PMT	0.359	0.257	0.338	0.364	0.368	0.349
Method 2 Extended PMT	0.362	0.256	0.327	0.322	0.304	0.335
Categorical Targeting						
Elderly 65+	0.362	0.305	0.359	0.386	0.327	0.359
Widowed or disabled	0.352	0.300	0.371	0.374	0.370	0.357
Elderly, widows & disabled	0.348	0.294	0.345	0.377	0.324	0.347
Children under 14	0.328	0.269	0.286	0.330	0.351	0.317
Elderly, widows, disabled & children	0.338	0.269	0.289	0.335	0.325	0.322
Female heads with children	0.364	0.297	0.372	0.366	0.360	0.360

Note: Method 1 uses Round 1 PMT calibration and Round 2 data to generate predicted values. Method 2 uses Round 1 predicted values and compares to Round 2 actual household per capita consumption. The Basic and Extended PMT methods use Round 2 data only (i.e. no lags). Universal refers to a transfer to all households weighted by household size. Categorical targeting categories are defined in Table 9. Only panel households are included. Statistics are household weighted.
